Foods Containing Xylitol

Xylitol can be deadly for dogs. Always check the ingredients before giving something to your dog. Some common items are: Peanut Butter, Candy, Gum, Baking Supplies, Protein Bars/Powders, and Dental Products.

Know The Signs of Poisoning

- Excessive Salivation
- Breathing Difficulty
- Excitability
- Loss of Consciousness
- Seizures
- Vomiting
- Diarrhea

Important Info to Gather

- What time did the poisoning occur?
 - + Knowing the amount of time that your pet was exposed can help a vet determine how to treat them.
- What substance were they exposed to?
 - + Take all packages, bottles, and labels with you so that the vet can read the MSDS data and create a plan of action.
- Did They Vomit?
 - + If your pet has vomited, take a sample of the vomit with you in a Ziploc bag so that it can be tested if necessary.
- Contact Your Vet!
 - + They will be able to give you a plan of action if they feel there are steps that need to be taken before transporting them to the office/hospital.
